

Required reading:

- Larson 9e: pages 489-494
- Dawkins: Calculus I, section 6-6: Work
<http://tutorial.math.lamar.edu/Classes/CalcI/Work.aspx>
 - Notes: Read all. (Last modified: 05/30/2018)
 - Practice Problems: Review all. (Last modified: 03/01/2018)

Required homework:

- Larson 9e: problems 5, 7, 13a, 17b, 27, 31, 39, 41

Additional comments regarding the Dawkins reading:

It isn't explicitly stated in Example 1, but since the force is measured in newtons (N), if distance is measured in meters (m), then work is measured in joules (J). That is why 0.1 m is used instead of 10 cm, and 0.15 m and 0.18 m instead of 15 cm and 18 cm.
